

Bale Grabber

Features	Benefits
Quick Attach Hitch (BG2400)	Fits skid steer, track loaders, and tractor loaders with a universal quick attach hitch.
Euro Hitch (BGE2400)	Fits tractor loaders with a Euro hitch.
0" to 92 1/2" arm tip opening	Can easily pick up round bales up to 72" diameter.
Greasable 1 1/4" pivot pins	Heavy built greasable pivot pins last a long time.
3" Bore hydraulic cylinder	Large 3" bore cylinder provides excellent arm squeezing forces to grip large bales.
Arms are constructed of heavy round and square tubing	Grab arms are built strong to withstand bending forces. Round tubing is gentler when handling wrapped bales.
Back Stop	Helps stop the bale from rolling down the loader arms onto the operator.
Options	
Hydraulic cylinder without valve	Works well for power units that maintain grip pressure.
Hydraulic cylinder with valve	Protect against oil seeping out of the system and loss of hydraulic pressure. Keeps constant hold pressure on the bale.
Skid steer hose kit	Used to couple BG2400 Bale Grabber to skid steers and track loaders.
Tractor hose kit (24' hoses)	Long enough to reach to the tractor's rear couplers. Excellent choice when the tractor front loader does not have couplers mounted at the front of the loader.
Third function hose kit (5' hoses)	Provides easy hydraulic hook-up and disconnect at the front of tractor loaders equipped with a 3rd function valve.
Kubota Accessory	
Kubota SVL Hose Stay #S6689 or SSV Hose Stay #77700-07225	Keeps hydraulic hoses out of the hinged hitch plate area. Eliminates hose damage. Purchase hose stay kits through your nearest Kubota dealer.
