

### CB25 Series

| Features                                                                    | Benefits                                                                                                          |
|-----------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------|
| <b>Four-in-one bucket design</b>                                            | Can be used as a standard bucket, clamshell bucket, grapple, or dozer.                                            |
| <b>Attaches to power equipment easily</b>                                   | Uses Skid Steer Quick Hitch design for quick and easy attachment.                                                 |
| <b>1 1/4" Pivot pins</b>                                                    | Large diameter pins for extra strength.                                                                           |
| <b>Jaw pivot pins have greasable hardened bushings</b>                      | Bushings can be replaced if needed.                                                                               |
| <b>Reinforced bucket</b>                                                    | Adds strength and rigidity to the bucket, clamshell, and dozer features of the four-in-one bucket.                |
| <b>Serrated interlocking grapple teeth on bucket side panels</b>            | Various sizes, shapes, and weights of objects can be picked-up and held securely in the serrated teeth.           |
| <b>Replaceable bucket side cutters</b>                                      | Stiffens and protects bucket front side panel corners.                                                            |
| <b>Reversible and replaceable clamshell blades</b>                          | Reversible blades extends the life of the blade and can be replaced to extend the life of the bucket.             |
| <b>Reversible and replaceable front cutting edge when included with jaw</b> | Reversible front cutting edge extends the life of the blade and can be replaced to extend the life of the bucket. |
| <b>Replaceable tooth tips when teeth are included with jaw</b>              | Can be easily replaced as they wear or break.                                                                     |
| Optional Equipment                                                          |                                                                                                                   |
| <b>Spill guard</b>                                                          | Helps protect the operator against spills over the back side of the bucket and increases capacity.                |
| <b>Counterbalance valve</b>                                                 | Prevents hydraulic bleed-off / improves cylinder control.                                                         |
