

# SGS15 SERIES SKELETON GRAPPLES

50-135 HP | Universal Quick-Attach

## Ideal for storm clean-up and land clearing operations.

Let the Land Pride Skeleton Grapple do the digging for you by removing roots, stumps, and other timber or debris. These are available in 66" and 78" widths and with 5-1/2" spacing between the teeth, smaller debris is sifted easily. Dual hydraulic cylinders on the SGS15 can close at various gaps to handle irregular shapes, and serrated teeth make this grapple a work-horse in storm clean up and land clearing operations. Our Skeleton Grapple also features available bolt-on side panels.

Optional covers protect hydraulic cylinders and fittings.

Optional bolt-on side panels create a bucket for rock or debris sifting.

Serrated teeth design allows for better load gripping.
